# **Chapter 1**

# **Hierarchical Index**

## 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

a	??
_ista	??
BiegaczLista	??
nnable	??
Biegacz	
BiegaczLista	??
per	??
Stoper	??
e	??
zia	??

2 **Hierarchical Index** 

# Chapter 2

# **Class Index**

## 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Biegacz		??
Biegaczl	Lista	
	Przygotowuje liste i definiuje przebieg jej uzupelniania	??
ILista .		??
<b>IRunnab</b>	le	??
IStoper Lista		??
Node	Deklaruje funkcje listy	??
Noue	Pojedynczy element	??
Sedzia		
	Jest to klasa nadrzedna , ktora struje klasami Stoper i Biegacz poprzez odwolanie sie do interfejsow	??
Stoper	Zastepuje kilkukrotne wklejanie pliku naglowkowego	??

Class Index

# **Chapter 3**

# File Index

## 3.1 File List

Here is a list of all files with brief descriptions:

nome/patr95/Pulpit/PAMSI/1403/prog/prj/build/CMakeFiles/2.8.12.2/CompilerIdC/CMakeCCompile	erld.c ??
nome/patr95/Pulpit/PAMSI/1403/prog/prj/build/CMakeFiles/2.8.12.2/CompilerIdCXX/CMakeCXXCId.cpp	ompiler-
nome/patr95/Pulpit/PAMSI/1403/prog/prj/CMakeFiles/2.8.12.2/CompilerIdC/CMakeCCompilerId.c	??

## **Chapter 4**

## **Class Documentation**

## 4.1 Biegacz Class Reference

```
#include <Biegacz.h>
```

Inheritance diagram for Biegacz:

### **Public Member Functions**

- Biegacz ()
- virtual ∼Biegacz ()
- bool prepare (int size)

  przygotowanie biegacza, czyli oczyszczenie z tablicy wynikow po wczesniejszym biegu i przygotowanie nowego dys-
- bool run ()

### 4.1.1 Detailed Description

Definition at line 7 of file Biegacz.h.

### 4.1.2 Constructor & Destructor Documentation

```
4.1.2.1 Biegacz::Biegacz ( )
```

stworzenie tablicy do powiekszenia

Definition at line 3 of file Biegacz.cpp.

```
4.1.2.2 Biegacz::~Biegacz( ) [virtual]
```

Definition at line 10 of file Biegacz.cpp.

8 Class Documentation

### 4.1.3 Member Function Documentation

```
4.1.3.1 bool Biegacz::prepare (int size) [virtual]
```

Sprzatam po poprzednim "biegu", ustawiam wartosci poczatkowe

oczekiwana wart: 10,10<sup>3</sup>,10<sup>5</sup>...

Implements IRunnable.

Definition at line 50 of file Biegacz.cpp.

```
4.1.3.2 bool Biegacz::run() [virtual]
```

uzupelnianie tablicy zerami.

Implements IRunnable.

Definition at line 61 of file Biegacz.cpp.

The documentation for this class was generated from the following files:

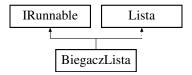

- /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/Biegacz.h
- /home/patr95/Pulpit/PAMSI/1403/prog/prj/src/Biegacz.cpp

### 4.2 BiegaczLista Class Reference

Przygotowuje liste i definiuje przebieg jej uzupelniania.

```
#include <BiegaczLista.h>
```

Inheritance diagram for BiegaczLista:

### **Public Member Functions**

- bool prepare (int rozmiar\_docelowy)
- bool run ()

### 4.2.1 Detailed Description

Definition at line 10 of file BiegaczLista.h.

### 4.2.2 Member Function Documentation

```
4.2.2.1 bool BiegaczLista::prepare (int rozmiar_docelowy) [virtual]
```

Klasa pomocnicza majaca na celu zdefiniowanie metod z tablicowego Biegacza, dla listy. Usuwa wczesniej modyfikowana liste. Funkcja prepare zwieksza rozmiar listy do rozmiaru docelowego, wypelnia ja losowymi slowami, oraz jednym slowem ktorego bedziemy szukac. sprztanie po poprzedniej liscie.

wypelnienie listy losowymi slowami/elementami(stale)

4.3 ILista Class Reference 9

wrzucanie wyrazu na losowe miejsce w liscie

Implements IRunnable.

Definition at line 3 of file BiegaczLista.cpp.

```
4.2.2.2 bool BiegaczLista::run() [virtual]
```

Funkcja run wyszukuje slowo i zwraca prawde lub falsz w zaleznosci ,czy znalazlo czy nie. przeszukuje liste by znalezc slowo podane nizej.

Implements IRunnable.

Definition at line 21 of file BiegaczLista.cpp.

The documentation for this class was generated from the following files:

- /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/BiegaczLista.h
- /home/patr95/Pulpit/PAMSI/1403/prog/prj/src/BiegaczLista.cpp

### 4.3 ILista Class Reference

#include <ILista.h>

Inheritance diagram for ILista:

### **Public Member Functions**

- virtual void Add (std::string item, int index)=0
- virtual void Remove (int index)=0
- virtual bool IsEmpty ()=0
- virtual std::string Get (int index)=0
- virtual int Size ()=0

### 4.3.1 Detailed Description

Definition at line 5 of file ILista.h.

### 4.3.2 Member Function Documentation

4.3.2.1 virtual void | Lista::Add ( std::string item, int index ) [pure virtual]

Implemented in Lista.

**4.3.2.2** virtual std::string | Lista::Get (int index ) [pure virtual]

Implemented in Lista.

10 Class Documentation

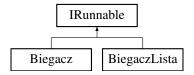

```
4.3.2.3 virtual bool ILista::IsEmpty() [pure virtual]
Implemented in Lista.
4.3.2.4 virtual void ILista::Remove(int index) [pure virtual]
Implemented in Lista.
4.3.2.5 virtual int ILista::Size() [pure virtual]
Implemented in Lista.
```

The documentation for this class was generated from the following file:

/home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/ILista.h

### 4.4 IRunnable Class Reference

```
#include <IRunnable.h>
Inheritance diagram for IRunnable:
```

### **Public Member Functions**

- virtual bool prepare (int size)=0
- virtual bool run ()=0

### 4.4.1 Detailed Description

Definition at line 3 of file IRunnable.h.

### 4.4.2 Member Function Documentation

```
4.4.2.1 virtual bool IRunnable::prepare (int size) [pure virtual]
```

Implemented in Biegacz, and BiegaczLista.

```
4.4.2.2 virtual bool IRunnable::run() [pure virtual]
```

Implemented in Biegacz, and BiegaczLista.

The documentation for this class was generated from the following file:

/home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/IRunnable.h

### 4.5 IStoper Class Reference

```
#include <IStoper.h>
```

Inheritance diagram for IStoper:

### **Public Member Functions**

- virtual void Start ()=0
- virtual void Stop ()=0
- virtual double getElapsedTime ()=0
- virtual void dumpToFile (std::string const &)=0

### 4.5.1 Detailed Description

Definition at line 5 of file IStoper.h.

### 4.5.2 Member Function Documentation

```
4.5.2.1 virtual void |Stoper::dumpToFile ( std::string const & ) [pure virtual]
```

Implemented in Stoper.

```
4.5.2.2 virtual double | Stoper::getElapsedTime() [pure virtual]
```

Implemented in Stoper.

```
4.5.2.3 virtual void | Stoper::Start() [pure virtual]
```

Implemented in Stoper.

```
4.5.2.4 virtual void |Stoper::Stop() [pure virtual]
```

Implemented in Stoper.

The documentation for this class was generated from the following file:

• /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/IStoper.h

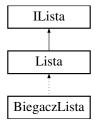

### 4.6 Lista Class Reference

Deklaruje funkcje listy.

#include <Lista.h>

Inheritance diagram for Lista:

12 Class Documentation

### **Public Member Functions**

- void Add (std::string item, int index)
- void Remove (int index)
- bool IsEmpty ()
- std::string Get (int index)
- int Size ()
- Lista ()

### 4.6.1 Detailed Description

Definition at line 17 of file Lista.h.

### 4.6.2 Constructor & Destructor Documentation

4.6.2.1 Lista::Lista() [inline]

Definition at line 62 of file Lista.h.

### 4.6.3 Member Function Documentation

4.6.3.1 void Lista::Add ( std::string item, int index ) [virtual]

Funkcja Add dodaje kolejny element listy. Jesli rozmiar listy jest za maly w stosunku do podawanego indexu to wyswietla komunikat. Funkcja dziala w taki sposob, ze tworzy nowy "Node" do tablicy, wskaznik z wczesniejszego elementu wskazuje na nowy Node nastepnie z Node wskazujemy na kolejny element tablicy, aby byla ciaglosc w liscie. W tej funkcji rozpatrujemy 3 przypadki zwieksznaia listy, dostawianie elementu na pocz,koniec lub gdzies pomiedzy w liscie. Jesli dostawiamy na poczatek tworzymy nowy element i wskazujemy na niego wskaznikiem poczatkowym i koncowym. Jesli tworzymy ostatni element, to dodajemy nowego Noda, i wskazujemy na niego wskaznikiemKONcowym. Osttanim przypadkiem jest elementu gdzies pomiedzy POCZ i KON listy. Tutaj musimy pamietac ze lista liczy swojem miejsca od 0, wiec w petli for mamy index-1. Tworzymy tymczasowy wskaznik i ustawiamy go na pierwszy element. nastepnie w petli przesówamy o tyle elementów ile zadamy-1. Przesuwamy ten wskaznik na kolejny element, tworzymy pomocniczy wskaznik ktory ma wskazywac na nowo utworzony element. W nowo utworzonym elemencie dodajemy wskaznik ktory wskazuje na nastepny element ktory byl stworzony przed naszym nowym Nodem. Wszystko po to by zachowac ciaglosc listy i wskazywanie na kolejne elementy. dostawiam element na poczatku i wskazuje na wczesniejszy element

aktualizowanie poczatkowoego wskaznika na nowo dodany element aktualizowanie koncowego+ wskaznika na nowo dodany element wskaznik koncowy wskazuje na podpiete nowe pole w liscie temp to tymczasowy wskaznik dodawanej listy przestawiamy sie na kolejny element pomocniczy wskaznik

4.6 Lista Class Reference 13

wskazuje na nowo stworzony element

w nowo dodanym elemencie ustawiamy wskaznik na wczesniejszy(ktory jest następnym) elementem.

Implements ILista.

Definition at line 12 of file Lista.cpp.

```
4.6.3.2 std::string Lista::Get (int index ) [virtual]
```

W tej funkcji tworzymy wskaznik tymczasowy na 1 element listy, przesuwamy o index-1 , po znalezieniu interesujacego nas elementu zwracamy jego wartosc. temp to tymczasowy wskaznik dodawanej listy

Implements ILista.

Definition at line 70 of file Lista.cpp.

```
4.6.3.3 bool Lista::lsEmpty() [virtual]
```

Zwraca true jesli lista jest pusta lub false jesli nie jest.

Implements ILista.

Definition at line 8 of file Lista.cpp.

```
4.6.3.4 void Lista::Remove (int index) [virtual]
```

Remove działa w podobny sposob. Jesli zadamy usuniecie 1 elementu, to zapamietujemy cos na co wskazuje 1 element. Usuwamy to, by nastepnie ustawic wskaznik poczatkowy na cos, na co wskazywał pierwszy element. Jesli usuwamy ostatni element to tworzymy wskaznik tymczasowy na pierwszy element, przesuwamy do ostatniego, gdzie index zmniejszamy -2, poniewaz indexujemy liste od zera, oraz interesuje nas wczesniejszy element ktory wskazuje na ostatni. Gdy osiegniey przedostatni element wskazujemy jego wskaznikiem na null pointer oraz usuwamy wczesniejszy osttni element z listy na ktorego nic nie wskazuje. W ostatnim przypadku tworzymy tymczasowy nastepnik , ktory jest wskaznikiem na wskaznik. Przesukujemy liste od poczatku, usuwamy element i nasz wskaznik dalej wskazuje na kolejny element dzieki nastepnikowi. Zachowana jest ciaglosc wskazywania na siebie elementow z listy, zapamietaj drugi element listy

usun pierwszy element

przestaw drugi na pierwszy

temp to tymczasowy wskaznik dodawanej listy

przestawiamy sie na kolejny element

temp to tymczasowy wskaznik dodawanej listy

Implements ILista.

Definition at line 43 of file Lista.cpp.

```
4.6.3.5 int Lista::Size() [virtual]
```

Size zwraca nam zmienna rozmiar.

Implements ILista.

Definition at line 3 of file Lista.cpp.

The documentation for this class was generated from the following files:

- /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/Lista.h
- /home/patr95/Pulpit/PAMSI/1403/prog/prj/src/Lista.cpp

14 Class Documentation

### 4.7 Node Struct Reference

### pojedynczy element

```
#include <Lista.h>
```

### **Public Attributes**

- Node \* wskaznik
- std::string wartosc

### 4.7.1 Detailed Description

Definition at line 8 of file Lista.h.

### 4.7.2 Member Data Documentation

4.7.2.1 std::string Node::wartosc

Definition at line 11 of file Lista.h.

### 4.7.2.2 Node\* Node::wskaznik

Definition at line 10 of file Lista.h.

The documentation for this struct was generated from the following file:

• /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/Lista.h

### 4.8 Sedzia Class Reference

Jest to klasa nadrzedna, ktora struje klasami Stoper i Biegacz poprzez odwolanie sie do interfejsow.

```
#include <Sedzia.h>
```

### **Public Member Functions**

- Sedzia (IRunnable &biegacz, IStoper &stoper)
- void release ()

### 4.8.1 Detailed Description

Definition at line 16 of file Sedzia.h.

### 4.8.2 Constructor & Destructor Documentation

4.8.2.1 Sedzia::Sedzia (IRunnable & biegacz, IStoper & stoper ) [inline]

Definition at line 21 of file Sedzia.h.

### 4.8.3 Member Function Documentation

```
4.8.3.1 void Sedzia::release ( )
```

Przez funkcje release wywolujemy kolejno funkcje biegacz prepare->Start->run->Stop->getElapsedTime->dumpToFile ktore sa zdefiniowane w klasach Stoper i Biegacz. Mamy taka mozliwosc poprzez interfejsy.

Definition at line 3 of file Sedzia.cpp.

The documentation for this class was generated from the following files:

- /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/Sedzia.h
- /home/patr95/Pulpit/PAMSI/1403/prog/prj/src/Sedzia.cpp

### 4.9 Stoper Class Reference

zastepuje kilkukrotne wklejanie pliku naglowkowego

```
#include <Stoper.h>
```

Inheritance diagram for Stoper:

### **Public Types**

- using clock = std::chrono::high\_resolution\_clock
  - const& =unikamy kopi
- using time\_point = clock::time\_point

czas systemowy

• using time\_type = std::chrono::milliseconds

### **Public Member Functions**

- void Start ()
- void Stop ()
- double getElapsedTime ()

duration cast=operator porownujacy, pozwala odjac 2 punkty w czasie

void dumpToFile (std::string const &)

### 4.9.1 Detailed Description

Mierzy czas, wyswitla czas okrazenia, zwraca wyniki do pliku.

Definition at line 13 of file Stoper.h.

### 4.9.2 Member Typedef Documentation

4.9.2.1 using Stoper::clock = std::chrono::high\_resolution\_clock

Definition at line 34 of file Stoper.h.

16 Class Documentation

```
4.9.2.2 using Stoper::time_point = clock::time_point
```

Definition at line 35 of file Stoper.h.

4.9.2.3 using Stoper::time\_type = std::chrono::milliseconds

Definition at line 36 of file Stoper.h.

### 4.9.3 Member Function Documentation

```
4.9.3.1 void Stoper::dumpToFile ( std::string const & nazwaPliku ) [virtual]
```

dumpToFile wysyla wyniki do pliku tekstowego. Jesli go nie am to go tworzy. Wyniki wysylane sa w kolejnosci wykonania petli.

Implements IStoper.

Definition at line 19 of file Stoper.cpp.

```
4.9.3.2 double Stoper::getElapsedTime( ) [virtual]
```

getElapsedTime wykonuje roznice (Stop-Start) i zwraca czas w milisekundach

Implements IStoper.

Definition at line 13 of file Stoper.cpp.

```
4.9.3.3 void Stoper::Start() [virtual]
```

Start pobiera czas systemowy przed wykonaniem zadania

Implements IStoper.

Definition at line 3 of file Stoper.cpp.

```
4.9.3.4 void Stoper::Stop() [virtual]
```

Stop pobiera czas systemowy po wykonaniu zadania

Implements IStoper.

Definition at line 8 of file Stoper.cpp.

The documentation for this class was generated from the following files:

- /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/Stoper.h
- /home/patr95/Pulpit/PAMSI/1403/prog/prj/src/Stoper.cpp

('0' + (((n) / 10) $10)), \
('0' + ((n) / 10) $10)), \
('0' + ((n) $ 10))
```

Definition at line 317 of file CMakeCXXCompilerId.cpp.

```
5.3.1.4 #define HEX( n )
```

### Value:

```
('0' + ((n)>>28 & 0xF)), \
('0' + ((n)>>24 & 0xF)), \
('0' + ((n)>>26 & 0xF)), \
('0' + ((n)>>16 & 0xF)), \
('0' + ((n)>>12 & 0xF)), \
('0' + ((n)>>8 & 0xF)), \
('0' + ((n)>>8 & 0xF)), \
('0' + ((n)>>4 & 0xF)), \
('0' + ((n)>>4 & 0xF)), \
```

Definition at line 328 of file CMakeCXXCompilerId.cpp.

### 5.3.1.5 #define PLATFORM\_ID ""

Definition at line 280 of file CMakeCXXCompilerId.cpp.

### 5.3.2 Function Documentation

```
5.3.2.1 int main ( int argc, char * argv[] )
```

Definition at line 367 of file CMakeCXXCompilerId.cpp.

### 5.3.3 Variable Documentation

```
5.3.3.1 char const* info_arch = "INFO" ":" "arch[" ARCHITECTURE_ID "]"
```

Definition at line 361 of file CMakeCXXCompilerId.cpp.

```
5.3.3.2 char const* info_compiler = "INFO" ":" "compiler[" COMPILER_ID "]"
```

Definition at line 201 of file CMakeCXXCompilerId.cpp.

```
5.3.3.3 char const* info_platform = "INFO" ":" "platform[" PLATFORM_ID "]"
```

Definition at line 360 of file CMakeCXXCompilerId.cpp.

22 File Documentation

# 5.4 /home/patr95/Pulpit/PAMSI/1403/prog/prj/CMakeFiles/2.8.12.2/CompilerIdCXX/C-MakeCXXCompilerId.cpp File Reference

### **Macros**

- #define COMPILER\_ID ""
- #define PLATFORM ID ""
- #define ARCHITECTURE ID ""
- #define DEC(n)
- #define HEX(n)

### **Functions**

• int main (int argc, char \*argv[])

### **Variables**

```
    char const * info_compiler = "INFO" ":" "compiler[" COMPILER_ID "]"
    char const * info_platform = "INFO" ":" "platform[" PLATFORM_ID "]"
```

```
• char const * info_arch = "INFO" ":" "arch[" ARCHITECTURE_ID "]"
```

### 5.4.1 Macro Definition Documentation

```
5.4.1.1 #define ARCHITECTURE_ID ""
```

Definition at line 313 of file CMakeCXXCompilerId.cpp.

```
5.4.1.2 #define COMPILER_ID ""
```

Definition at line 193 of file CMakeCXXCompilerId.cpp.

```
5.4.1.3 #define DEC( n )
```

### Value:

```
('0' + (((n) / 10000000) %10)), \
('0' + (((n) / 1000000) %10)), \
('0' + (((n) / 100000) %10)), \
('0' + (((n) / 10000) %10)), \
('0' + (((n) / 1000) %10)), \
('0' + (((n) / 100) %10)), \
('0' + (((n) / 100) %10)), \
('0' + (((n) / 10) %10)), \
('0' + (((n) % 10)))
```

Definition at line 317 of file CMakeCXXCompilerId.cpp.

```
5.4.1.4 #define HEX( n)
```

### Value:

Definition at line 328 of file CMakeCXXCompilerId.cpp.

5.4.1.5 #define PLATFORM\_ID ""

Definition at line 280 of file CMakeCXXCompilerId.cpp.

### 5.4.2 Function Documentation

5.4.2.1 int main ( int argc, char \* argv[] )

Definition at line 367 of file CMakeCXXCompilerId.cpp.

### 5.4.3 Variable Documentation

```
5.4.3.1 char const* info_arch = "INFO" ":" "arch[" ARCHITECTURE_ID "]"
```

Definition at line 361 of file CMakeCXXCompilerId.cpp.

```
5.4.3.2 char const* info_compiler = "INFO" ":" "compiler[" COMPILER_ID "]"
```

Definition at line 201 of file CMakeCXXCompilerId.cpp.

```
5.4.3.3 char const* info_platform = "INFO" ":" "platform[" PLATFORM_ID "]"
```

Definition at line 360 of file CMakeCXXCompilerId.cpp.

## 5.5 /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/Biegacz.h File Reference

```
#include "IRunnable.h"
```

### Classes

· class Biegacz

### **Variables**

• const int poczatkowy\_rozmiar\_tablicy = 10

### 5.5.1 Variable Documentation

5.5.1.1 const int poczatkowy\_rozmiar\_tablicy = 10

Definition at line 5 of file Biegacz.h.

24 File Documentation

## 5.6 /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/BiegaczLista.h File Reference

```
#include "Lista.h"
#include "IRunnable.h"
#include <random>
```

### **Classes**

· class BiegaczLista

Przygotowuje liste i definiuje przebieg jej uzupelniania.

## 5.7 /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/ILista.h File Reference

```
#include <string>
```

### **Classes**

• class ILista

## 5.8 /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/IRunnable.h File Reference

### Classes

· class IRunnable

## 5.9 /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/IStoper.h File Reference

```
#include <string>
```

### Classes

· class IStoper

## 5.10 /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/Lista.h File Reference

```
#include <string>
#include <iostream>
#include "ILista.h"
```

### Classes

struct Node

pojedynczy element

· class Lista

Deklaruje funkcje listy.

## 5.11 /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/Sedzia.h File Reference

```
#include "IRunnable.h"
#include "IStoper.h"
#include <fstream>
#include <string>
#include <iostream>
```

### Classes

• class Sedzia

Jest to klasa nadrzedna , ktora struje klasami Stoper i Biegacz poprzez odwolanie sie do interfejsow.

### **Variables**

const std::string NAZWA\_PLIKU\_Z\_ILOSCIA\_ELEMENTOW = "dystans.txt"

### 5.11.1 Variable Documentation

5.11.1.1 const std::string NAZWA\_PLIKU\_Z\_ILOSCIA\_ELEMENTOW = "dystans.txt"

Definition at line 10 of file Sedzia.h.

### 5.12 /home/patr95/Pulpit/PAMSI/1403/prog/prj/inc/Stoper.h File Reference

```
#include <iostream>
#include <chrono>
#include <string>
#include <fstream>
#include "IStoper.h"
```

### Classes

· class Stoper

zastepuje kilkukrotne wklejanie pliku naglowkowego

## 5.13 /home/patr95/Pulpit/PAMSI/1403/prog/prj/src/Biegacz.cpp File Reference

```
#include "Biegacz.h"
```
